

Table of Contents

1	Introduction	1
1.1	The role of production scheduling	1
1.2	Challenges for implementing scheduling algorithms in industry.....	4
1.3	Expectations	5
1.4	Motivation and goals.....	5
1.5	Overview of the thesis.....	6
2	Fundamentals.....	9
2.1	Scheduling and rescheduling in manufacturing	9
2.2	Rolling time horizon approach for rescheduling.....	11
2.3	Schema for the Classification of Scheduling Problems	13
3	Job shop problem in production and logistics processes.....	15
3.1	Total weighted tardiness as optimality criterion	15
3.2	Notation.....	15
3.3	Disjunctive graph representation.....	16
4	State-of-the-arts for the job shop total weighted tardiness problem.....	19
4.1	The exact methods.....	19
4.2	Heuristics.....	21
5	Research gap, objectives and methodologies of this research.....	25
6	Shifting bottleneck (SB) procedure	27
7	Components of the SB procedure and their new solutions.....	31
7.1	Subproblem solution procedure (SSP)	31
7.1.1	ATC based priority rules as SSP:.....	31
7.1.2	Backtracking as SSP	32
7.1.3	Variable neighbourhood search as SSP	33
7.2	Bottleneck selection and machine criticality measurement (MCM)...	35
7.3	Reoptimization	35
7.4	Optimization of the machine planning sequence	36
7.4.1	Backtracking for the machine planning sequence	37
7.4.2	Variable neighbourhood search for the machine planning sequence	37
8	Computational study of the SB components	41

8.1	Subproblem solution procedure (SSP).....	43
8.1.1	Determination of k for ATC based priority rules	43
8.1.2	Backtracking and Variable Neighbourhood Search.....	46
8.2	Bottleneck selection and machine criticality measurement (MCM)...	47
8.3	Reoptimization	48
8.4	Machine planning order	49
9	Comparison with the state-of-the-art methods	53
9.1	Pinedo and Singer's benchmark.....	57
9.2	Taillard's 50 x 20 benchmark	58
9.3	Taillard's 100 x 20 benchmark	64
9.4	150 x 20 dynamic instances	68
9.5	Summary of the experiment results.....	70
10	Conclusions.....	71
11	Future research directions.....	75
